Object literal shorthand syntax should be used

Code Smell

Strings and non-strings should not be added

Code Smell

Object literal syntax should be used

Code Smell

"undefined" should not be assigned

Code Smell

Trailing commas should not be used

Code Smell

Array constructors should not be used

Code Smell

Quotes for string literals should be used consistently

Code Smell

Statements should end with semicolons

Code Smell

Comments should not be located at the end of lines of code

Code Smell

Loops should not contain more than a single "break" or "continue" statement

Code Smell

Variable, property and parameter names should comply with a naming convention

Code Smell

Lines should not end with trailing whitespaces

Code Smell

Trailing commas should be used

Analyze your code

Code Smell

Minor ?

convention

Modern browsers ignore unneeded, trailing commas, so there are no negatives to having them unless you're supporting an IE 8 application. Since they make adding new properties simpler, their use is preferred. This rule raises an issue when the last item in a multiline construct (array or object literal, import or export statement, function declaration or call) does not end with a trailing comma and does not lie on the same line as the closing curly brace, bracket or parenthesis.

Noncompliant Code Example

```
var joe = {
  fname: "Joe",
  lname: "Smith"           // Noncompliant
};
```

Compliant Solution

```
var joe = {
  fname: "Joe",
  lname: "Smith",         // OK
};

var joe = {
  fname: "Joe",
  lname: "Smith";         // OK
};
```
