 Code Smell

Primitive types should be omitted from initialized or defaulted declarations

Non-null assertions should not be used

"undefined" should not be assigned

Trailing commas should not be used

Array constructors should not be used

Quotes for string literals should be used consistently

Statements should end with semicolons

Comments should not be located at the end of lines of code

Loops should not contain more than a single "break" or "continue" statement

Variable, property and parameter names should comply with a naming convention

Lines should not end with trailing whitespaces

Built-in objects should not be overridden

Analyze your code

 Bug

 Major

 confusing

Overriding an object changes its behavior and could potentially impact all code using that object. Overriding standard, built-in objects could therefore have broad, potentially catastrophic effects on previously-working code.

This rule detects overrides of the following native objects:

- Fundamental objects - Object, Function, Boolean, Symbol, Error, EvalError, InternalError, RangeError, ReferenceError, SyntaxError, TypeError, URIError
- Numbers and dates - Number, Math, Date
- Text processing - String, RegExp
- Indexed collections - Array, Int8Array, Uint8Array, Uint8ClampedArray, Int16Array, Unit16Array, Int32Array, Uint32Array, Float32Array, Float64Array
- Keyed collections - Map, Set, WeakMap, WeakSet
- Structured data - ArrayBuffer, DataView, JSON
- Control abstraction objects - Promise
- Reflection - Reflect, Proxy
- Internationalization - Intl
- Non-standard objects - Generator, Iterator, ParallelArray, StopIteration
