Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your TYPESCRIPT code

- All rules 279
- Vulnerability 27
- Bug 51
- Security Hotspot 43
- Code Smell 158
- Quick Fix 50

Code Smell
Primitive types should be omitted from initialized or defaulted declarations
Code Smell
Non-null assertions should not be used
Code Smell
"undefined" should not be assigned
Code Smell
Trailing commas should not be used
Code Smell
Array constructors should not be used
Code Smell
Quotes for string literals should be used consistently
Code Smell
Statements should end with semicolons
Code Smell
Comments should not be located at the end of lines of code
Code Smell
Loops should not contain more than a single "break" or "continue" statement
Code Smell
Variable, property and parameter names should comply with a naming convention
Code Smell
Lines should not end with trailing whitespaces
Code Smell

Property getters and setters should come in pairs

Analyze your code

Code Smell Major ? pitfall

When an object is created with a setter for a property but without a getter for that property, the property is inaccessible and is thus useless.

This rule also enforces the reverse situation (getter but no setter).

Noncompliant Code Example

```
var obj = {
  set foo(value) {
    this.fooval = value;
  }
};
```

Compliant Solution

```
var obj = {
  set foo(value) {
    this.fooval = value;
  },
  get foo() {
    return this.fooval;
  }
};
```

or

```
var obj = {
  setFoo(value) { // a standard method, not a setter
    this.fooval = value;
  }
};
```
