 Code Smell

Primitive types should be omitted from initialized or defaulted declarations

 Code Smell

Non-null assertions should not be used

 Code Smell

"undefined" should not be assigned

 Code Smell

Trailing commas should not be used

 Code Smell

Array constructors should not be used

 Code Smell

Quotes for string literals should be used consistently

 Code Smell

Statements should end with semicolons

 Code Smell

Comments should not be located at the end of lines of code

 Code Smell

Loops should not contain more than a single "break" or "continue" statement

 Code Smell

Variable, property and parameter names should comply with a naming convention

 Code Smell

Lines should not end with trailing whitespaces

 Code Smell

Wildcard imports should not be used

Analyze your code

 Code Smell

 Critical

es2015 pitfall

On the principle that clearer code is better code, you should explicitly import the things you want to use in a module. Using `import *` imports everything in the module, and runs the risk of confusing maintainers. Similarly, `export * from "module"` ; imports and then re-exports everything in the module, and runs the risk of confusing not just maintainers but also users of the module.

Noncompliant Code Example

```
import * as Imported from "aModule"; // Noncompliant
```
