Object literal shorthand syntax should be used

Code Smell

Strings and non-strings should not be added

Code Smell

Object literal syntax should be used

Code Smell

"undefined" should not be assigned

Code Smell

Trailing commas should not be used

Code Smell

Array constructors should not be used

Code Smell

Quotes for string literals should be used consistently

Code Smell

Statements should end with semicolons

Code Smell

Comments should not be located at the end of lines of code

Code Smell

Loops should not contain more than a single "break" or "continue" statement

Code Smell

Variable, property and parameter names should comply with a naming convention

Code Smell

Lines should not end with trailing whitespaces

Code Smell

Wildcard imports should not be used

Analyze your code

Code Smell

Critical

es2015 pitfall

On the principle that clearer code is better code, you should explicitly import the things you want to use in a module. Using `import *` imports everything in the module, and runs the risk of confusing maintainers. Similarly, `export * from "module"` ; imports and then re-exports everything in the module, and runs the risk of confusing not just maintainers but also users of the module.

Noncompliant Code Example

```
import * as Imported from "aModule"; // Noncompliant
```
