 Code Smell

Primitive types should be omitted from initialized or defaulted declarations

 Code Smell

Non-null assertions should not be used

 Code Smell

"undefined" should not be assigned

 Code Smell

Trailing commas should not be used

 Code Smell

Array constructors should not be used

 Code Smell

Quotes for string literals should be used consistently

 Code Smell

Statements should end with semicolons

 Code Smell

Comments should not be located at the end of lines of code

 Code Smell

Loops should not contain more than a single "break" or "continue" statement

 Code Smell

Variable, property and parameter names should comply with a naming convention

 Code Smell

Lines should not end with trailing whitespaces

Local variables should not be declared and then immediately returned or thrown

 Code Smell

 Minor ?

 Quick Fix ?

 clumsy

Declaring a variable only to immediately return or throw it is a bad practice.

Some developers argue that the practice improves code readability, because it enables them to explicitly name what is being returned. However, this variable is an internal implementation detail that is not exposed to the callers of the method. The method name should be sufficient for callers to know exactly what will be returned.

Noncompliant Code Example

```
function computeDurationInMilliseconds(hours, minutes, seconds) {
  let duration = ((hours * 60) + minutes) * 60 + seconds;
  return duration;
}
```

Compliant Solution

```
function computeDurationInMilliseconds(hours, minutes, seconds) {
  return ((hours * 60) + minutes) * 60 + seconds * 1000;
}
```
