## Build a Code Breaker Game With JavaScript

Use JavaScript to accept user input, validation, and run game logic to build a game based on Mastermind.

- Build a Code Breaker Game With JavaScript

## Project Overview

Employ JavaScript best practices and elements to build a game called Code Breaker (based on the popular board game Mastermind).

The game randomly generates a hidden code, and the player gets 10 attempts to guess that code based on provided feedback.

## What You'll Need

You'll need a GitHub account, Git installed locally, and a code editor.

Never used Git and don't have a code editor? We have a video that walks you through all the steps you'll need to set this up.

## Live Demo

Wondering what this project will look like when you've completed it? [Follow this link](#) to see a live version of it.
