Search by name... 🔍

Unused local variables and functions should be removed

 Code Smell

Function call arguments should not start on new lines

 Code Smell

"switch" statements should have at least 3 "case" clauses

 Code Smell

A "while" loop should be used instead of a "for" loop

 Code Smell

Unnecessary imports should be removed

 Code Smell

Return of boolean expressions should not be wrapped into an "if-then-else" statement

 Code Smell

Boolean literals should not be used in comparisons

 Code Smell

Extra semicolons should be removed

 Code Smell

Class names should comply with a naming convention

 Code Smell

Track uses of "TODO" tags

 Code Smell

Web SQL databases should not be used

 Vulnerability

Variables should be defined before being used

 Bug

Comma operator should not be used

Analyze your code

 Code Smell

 Major ?

The comma operator takes two expressions, executes them from left to right and returns the result of the second one. Use of this operator is generally detrimental to the readability and reliability of code, and the same effect can be achieved by other means.

Noncompliant Code Example

```
i = a += 2, a + b; // What's the value of i ?
```

Compliant Solution

```
a += 2;
i = a + b;
```

Exceptions

Use of comma operator is tolerated:

- in initialization and increment expressions of for loops.

for(i = 0, j = 5; i < 6; i++, j++) { ... }

- If the expression sequence is explicitly wrapped in parentheses.
