Dependencies

- state

ui.router

The main module for ui.router

There are several sub-modules included with the ui.router module, however only this module is needed as a dependency within your angular app. The other modules are for organization purposes.

The modules are:

- ui.router - the main "umbrella" module
- ui.router.router -

You'll need to include **only** this module as the dependency within your angular app.

```
1. <!doctype html>
2. <html ng-app="myApp">
3. <head>
4.   <script src="js/angular.js"></script>
5.   <!-- Include the ui-router script -->
6.   <script src="js/angular-ui-router.min.js"></script>
7.   <script>
8.     // ...and add 'ui.router' as a dependency
9.     var myApp = angular.module('myApp', ['ui.router']);
10.  </script>
11. </head>
12. <body>
13. </body>
14. </html>
```
