Object literal shorthand syntax should be used

Code Smell

Strings and non-strings should not be added

Code Smell

Object literal syntax should be used

Code Smell

"undefined" should not be assigned

Code Smell

Trailing commas should not be used

Code Smell

Array constructors should not be used

Code Smell

Quotes for string literals should be used consistently

Code Smell

Statements should end with semicolons

Code Smell

Comments should not be located at the end of lines of code

Code Smell

Loops should not contain more than a single "break" or "continue" statement

Code Smell

Variable, property and parameter names should comply with a naming convention

Code Smell

Lines should not end with trailing whitespaces

Code Smell

Strings and non-strings should not be added

Analyze your code

Code Smell

Minor ?

confusing

Use a + with two numbers and you'll get addition. But use it with a string and anything else, and you'll get concatenation. This could be confusing, especially if it's not obvious that one of the operands is a string. It is recommended to explicitly convert the non-string component to make it easier to understand to future maintainers.

This rule raises an issue when + is used with a string and a non-string.

Noncompliant Code Example

```
function foo() {
  let x = 5 + 8; // okay
  let z = "8"
  return x + z; // Noncompliant; yields string "138"
}
```

Compliant Solution

```
function foo() {
  let x = 5 + 8;
  let z = "8"
  return x + Number(z);
}
```
