Ember CLI
MIRAGE

Build, test and demo your app using a client-side server

Productive

Spend less time wiring up HTTP stubs, and get back to developing your app.

Test-worthy

Use factories to define your server's state per test. Acceptance testing just got a whole lot easier.

Shareable

Share a functional prototype of your app that runs entirely in the client - before writing a single line of your API.

```
$ ember install ember-cli-mirage
```
